# AeroDrift Incident Report

Autonomous drift detection & remediation · generated 2026-10-14 10:24 UTC

## Summary

| | |
|---|---|
| **Findings** | 1 |
| **Critical findings** | 1 |
| **Detection time** | 2.08 ms |
| **Remediation time** | 0.046 ms |
| **Remediations confirmed** | 1 |

## What Drifted

**[CRITICAL] prod-database-01 became DIRECTLY reachable from the internet (it was not, in the previous snapshot).**

Exposure path: internet → sg-db → i-db01

## Autonomously Generated Remediation

AeroDrift built the following code with Python's **ast** module (not a string template) and executed it inside a locked-down sandbox with no builtin access:

```
client.revoke_security_group_ingress(GroupId='sg-db', IpPermissions=[{'IpProtocol':
    'tcp', 'FromPort': 5432, 'ToPort': 5432, 'IpRanges': [{'CidrIp': '0.0.0.0/0'}]}])
```

## Verification

**[REMEDIATED] prod-database-01 is no longer directly exposed to the internet (remediation confirmed).**
